## OBJECTIVE

---

MCA final-year student with strong skills in Java, Spring Boot, and MERN stack. Experienced in building real-time and full-stack applications. Seeking an entry-level software development role to contribute to scalable and efficient solutions.

## EDUCATION

---

**Master of Computer Application (MCA)**, JSS Academy of Technical Education, Noida 2024 - 2026  
Affiliated with Dr. APJ Abdul Kalam Technical University (AKTU). **(CGPA 8.27)**

**Bachelor of Computer Application (BCA)**, Marwar Business School Gorakhpur 2021 - 2024  
Affiliated with DDU Gorakhpur University (DDUGU). **(Percentage 75.63)**

## SKILLS

---

|                               |                                                                                                                                         |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Programming Languages:</b> | Java, C++, JavaScript.                                                                                                                  |
| <b>Web Technologies:</b>      | HTML5, CSS3, Bootstrap, React.js, Node.js, Express.js.                                                                                  |
| <b>Frameworks:</b>            | Spring, Spring Boot (REST APIs, Microservices), Docker.                                                                                 |
| <b>Database:</b>              | MySQL, MongoDB.                                                                                                                         |
| <b>Tools &amp; platforms:</b> | Git, GitHub, VS Code.                                                                                                                   |
| <b>Core Concepts:</b>         | Data Structures & Algorithms, Object-Oriented Programming (OOP), SDLC, Operating System (OS), Cloud Computing, DBMS, Computer Networks. |

## PROJECTS

---

### Car Rental System (Java – OOP Implementation) [Click here](#)

Developed a menu-driven Car Rental System using Java, applying core Object-Oriented Programming (OOP) principles such as encapsulation, inheritance, abstraction, and polymorphism. The system allows customers to rent and return cars, while maintaining records of available cars, rental details, and pricing calculations.

**Technologies Used:** Java, OOP Concepts, Collections Framework, Exception Handling.

### CodeFlow – (Real-time Collaborative Code Editor) [Click here](#)

Built a collaborative coding platform that allows multiple users to join virtual rooms and code together.

Implemented WebSocket-based synchronization for live code editing and compiler output sharing. Integrated Yjs (CRDT framework) for real-time, conflict-free code synchronization. Used UUIDs to generate unique room IDs for secure and isolated collaboration sessions. Integrated CodeMirror for syntax highlighting and a seamless editing experience.

**Technologies Used:** React, Express.js, Node.js, Socket.IO, CodeMirror, UUID.

### Wanderlust (Travel and Listing) – MERN Stack.

Built a full-stack Airbnb-style platform using MongoDB, Express.js, React.js, Node.js, JWT, Stripe, and Socket.io that connects travelers with hosts worldwide. Developed features such as user authentication, property listings, a booking system, real-time messaging, reviews, and secure payment processing. Allowed hosts to manage their listings with photos, amenities, pricing, and availability calendars, while guests can easily search, filter, and book properties.

**Technologies Used:** React.js, Node.js, MongoDB, Express.js, JWT, Stripe, Socket.io, Mongoose.

## HOBBIES AND INTERESTS

---

- Playing chess (improves logical thinking)
- Competitive coding, & problem-solving & DSA [Click here](#)
- Reading tech blogs & exploring new frameworks.
